Soil Health Partnership began in 2014 when The Nature Conservancy (TNC), Bayer, and Environmental Defense Fund (EDF) – alongside the National Corn Growers Association (NCGA) – shared the vision of developing a farmer-led research network to measure the impacts of implementing soil health practices on working farms.

The Soil Health Partnership promotes the adoption of soil health practices for economic and environmental benefit.

Farmer-led, farmer-focused

The Soil Health Partnership promotes the adoption of soil health practices for economic and environmental benefit.

Insights gained from on-farm trials provide farmers tools to make the best decisions for their farm.

Power in partnerships

While each partner organization maintains its own individual strategies and approaches for achieving improved sustainability performance, diverse partners will improve the economic and environmental sustainability of the farm.

How do you want to partner for soil health?

Let’s build a partnership that aligns our goals. Contact soilhealth@ncga.com to collaborate.
